

# NÁSTROJOVÉ OCELI PRO PRÁCI ZA STUDENA

## Rozměrový sortiment k dispozici

Tyčová ocel\*

Plech

\* ) Presented data refer exclusively to long products. Please observe the detailed explanations at the end of the data sheet (pdf).

## Popis produktu

BÖHLER K110 - Rozměrově stálá ledeburitická ocel 12% legovaná chromem. Obzvláště vhodná pro kalení na vzduchu. Dobrá houževnatost.

## Trasa tavení

Airmelted

## Vlastnosti

- > Odolnost proti opotřebení : dobré
- > Rozměrová stálost : dobré
- > Sekundárně kalená ocel pro práci za studena s nízkou rozměrovou změnou : dobré

## Použití

- > Průmyslové nože
- > Ražení mincí
- > Normálie (formy, plechy, kolíky, střížníky)
- > Komponenty pro podzemní práce (vrtné práce, hornictví)
- > Všeobecné díly pro strojírenství
- > Válcování
- > Přesné stříhání, lisování, ražení plechu
- > Šneky a komory
- > kladky
- > Thread rolling (CZ)
- > Tváření za studena
- > Lisování prášků za studena
- > Komponenty pro recyklační průmysl
- > Díly odolné proti opotřebení

## Technické údaje

Označení materiálu		Normy	
1.2379	SEL	4957	EN ISO
~T30402	UNS		
X153CrMoV12	EN		
D2	AISI		

## Chemické složení

C	Si	Mn	Cr	Mo	V
1,55	0,30	0,30	11,30	0,75	0,75

## Materiálové vlastnosti

	Tlaková zatížitelnost	Rozměrová stabilita při tepelném zpracování	Houževnatost	Odolnost proti opotřebení abrazivní	Odolnost proti opotřebení adhezivní

## Stav dodání

### Žiháno

Tvrdość (HB) | max. 250

## Tepelné zpracování

### Annealing

Teplota	800 na 850 °C	Slow controlled cooling in furnace at a rate of 10 to 20°C/hr down to approx. 600°C, further cooling in air.
---------	---------------	--

### Žihání na odstranění vnitřního pnutí

Teplota	650 na 700 °C	Slow cooling in furnace. Intended to relieve stresses set up by extensive machining, or in complex shapes. After through heating, hold in neutral atmosphere for 1 to 2 hours.
---------	---------------	--

### Kalení a popouštění

Teplota	1 030 na 1 070 °C	Complex shapes / air, simple shapes / air blast, oil, salt bath from (220 to 250°C or 500 to 550°C) or gas. Holding time after temperature equalization: 15 to 30 minutes. After hardening, tempering to the desired working hardness, see tempering chart.
---------	-------------------	---

## Tempering chart

### Tempering:

Specimen size: square 0,787 inch (20 mm)

Slow heating to tempering temperature immediately after hardening. Recommended tempering temperature is indicated by the blue area in the chart.

Time in furnace 1 hour for each 0,787 inch (20 mm) of workpiece thickness but at least 2 hours/cooling in air.

Slow cooling to room temperature after each tempering step is recommended.

Please refer to the tempering chart for guide values for the hardness achievable after tempering.

It is recommended to temper at least three times above the secondary hardness maximum.

Tempering for stress relieving 86 to 122 °F (30 to 50 °C) below the highest tempering temperature.
